EVERTON PARK POLL MERINO STUD

Welcome to Everton Park Poll

Stud Principals Adam Bennett and Emma Lenihan are passionate about breeding Poll Merinos that combine productive performance with practical functionality. The Everton Park flock has been carefully established using Moorundie, Nyowee, and Kerrylin Poll bloodlines, providing a strong genetic foundation for consistent and reliable sheep.

Our breeding objective is to produce balanced Poll Merinos that thrive in commercial environments while maintaining the wool quality and structure expected from leading sheep producers. Sheep are selected for soundness, doing ability and temperament, ensuring they remain practical and easy to manage across varying conditions.

Everton Park sheep carry a stylish medium-strong wool type with bright, white, soft-crimping wool averaging 18-20 micron and cutting 6kg at 6 months. These wool traits are supported by performance data including growth, fat depth and eye muscle.

The result is a line of functional rams designed to perform where it matters most - in the paddock, through the handling facilities and in the wool shed.

In 2026, Everton Park rams will be available for private selection from August 1st, with all rams graded starting at \$800.

Everton Park 2025 Drop Sires List

EPPM 67 - Everton Park 230067 (Yellow)

EPPM 008 - Everton Park 230008 (Purple)

SHREK - Moorundie Shrek (Dark Green)

BOR 366 - Borambil 220366 (Green)

M A147 - Moorundie A147 (Light Blue)

M C20 - Moorundie C20 (Red)

2026 Sale Rams Information

- DOB: April/May 2025 & June/July 2025
- All rams regulation march shorn
- All rams genomics tested
- All rams sold with current wool test and ASBV's
- Weighted, Muscle and Fat scanned on 27-06-2026
- Brucellosis Free Accredited

2026 Sale Team Averages

Trait	Everton Park Average
Micron	19.8
Eye muscle	41
FAT	5.6
PP Percentage	83%

Wool Testing

Micron - The average fibre diameter of the wool.

SD (Standard Deviation) - Measures the variation in fibre diameter across the sample.

CV (Coefficient of Variation) - Measures the consistency of fibre diameter relative to the average micron.

CF (Comfort Factor) - The percentage of fibres under 30 microns.
A higher CF means softer wool.

[illegible]

We'd like to extend our sincere thanks to all our new and returning clients for the trust and confidence you've placed in our genetics.

Your ongoing support means a great deal to us, and we truly appreciate the opportunity to be part of your breeding program.

We wish you every success with your purchases and look forward to seeing the results in the years ahead.
