### **General note to Buyers**

All rams being offered for sale in this catalogue must have been bred by registered members of the Australian Association of Stud Merino Breeders and/or their respective state Associations. Members are governed by the rulings of the Association (and their respective state Associations), including independent inspection of shearing times and fleece sampling.

This means that as a potential buyer of these rams being offered for sale you will have greater confidence in knowing that the selection on offer have been fairly shorn and sampled according to the minimum standards set for Merino Multivendor Ram Sales:

The Victorian Stud Merino Sheepbreeders' Association (VSMSBA), agents and DPI have endorsed the following minimum standards for multi-vendor rams sales for registered Merino flocks:

1. All sheep offered for sale at the Victorian multi-vendor sales must be tagged with an AASMB shearing tag or state based merino shearing tag by persons authorised by the VSMSBA or their interstate counterparts, in accordance with AASMB rules. Tags to be in the traditional shearing tag number format.
2. All sheep offered for sale at Victorian multi-vendor sales are to meet the measurement code of practice and publicly record:
  - A) date of midside sample taken from current fleece on sheep (to be taken as close as possible to date of sale but no longer than 12 weeks prior to sale)
  - B) date when last shorn
  - C) age of sheep
  - D) mean micron
  - E) standard deviation of FD
  - F) co-efficient of variation of FD
  - G) % >30 micron (comfort factor)
  - H) Spinning Fineness
  - I) Name of Testing House

## **MINIMUM STANDARDS FOR MERINO MULTI-VENDOR RAM SALES**

The fleece data included in this catalogue has been measured on samples collected from the current fleece. Sampling and measurements have been taken according to a protocol established by the Australian Association of Stud Merino Breeders and conforms to Australian Standard for fleece measurement sampling and testing (AS/NZ 4492); these samples accurately describe some aspects of the current fleece on these rams.

Caution should be exercised in using these measurements to judge the relative merit of different rams. The genetic merit of rams from different studs cannot be accurately determined on the basis of these measurements—different feeding and management regimes at different studs can strongly influence the fleece measurements. Notably, ram shed feeding may increase average fibre diameter of paddock grown fleeces by 4 to 6 microns above grown fleeces of the commercial progeny of these rams.

The best indicators of the genetic merit for fleece characteristics of rams in this catalogue are:

- The long term average values for fleece characteristics (average micron, CV, yield, fleece weight etc.) for fleeces grown under paddock conditions by adult ewes on the stud where each ram was bred.

- The estimated breeding values or phenotypic deviation of these rams relative to other rams bred in the same stud.

“Interpreting measurement information on sale rams for sale can be difficult. The core measurements that affect financial returns and management practices are: -

Average fibre diameter

- The spread or variation of fibre diameter
- Fleece weight

Although these traits are highly heritable (ie. can be improved by breeding), they are also very much affected by nutrition, age and where and when samples were taken for testing. If using the actual measurements to select rams, these things need to be taken into account.”

**Excerpt from Victorian industry ‘Buying Rams? Making the Measurements Useful’ brochure available from the VSMSBA.**

Every effort has been made to provide information in this catalogue to meet the Standards. Fleece measurement results should be used as a guide only. The Association and vendors take no responsibility for the accuracy nor the repeatability of information supplied.
